

THE PISTOL PAD™

The Pistol Pad is a tamper resistant, alarm initiation platform that will interface to any professionally installed or DIY alarm system using hard wire or wireless equipment selected by the security provider. When programmed as a panic zone, The Pistol Pad directly protects the unsecured weapon, even when the intrusion alarm system is disarmed.

If monitored, in the event of activation it is recommended that emergency response personnel be notified that it is a panic alarm and **“A GUN HAS BEEN DEPLOYED”**. The ability to respond armed with that information has garnered significant endorsements from law enforcement and firearm organizations alike.

- 80 million (estimated) gun owners in America with 250+ million guns.
- 80+% of all firearms used in violent crimes (except domestic violence) have been stolen by burglary or clandestine theft at some point.
- 50+ million (45%) of all households in America have guns.
- 40+ million guns are stored loaded and unsecured by lock or safe.
- 40+ million alarm systems are currently installed and do not directly protect unsecured guns 24/7. Approximately 1/2 of these systems are orphaned.
- 30+ % of burglary attempts on homes with alarms are successful because user failed to arm the system.
- 1 product in the industry specifically designed to address this market.
(Shotgun, Rifle, and Mobile products coming soon)

Just run the numbers above* and we believe you will find The Pistol Pad well worth including in your inventory of alarm peripherals.
